

Listing of the Claims:

The following is a complete listing of all the claims in the application, with an indication of the status of each:

- 1 1 (Currently Amended). A connection structure, comprising:
 - 2 a connector, having an inner side face defining a chamber formed
 - 3 with an opening, in which a module body is inserted, and having an outer
 - 4 side face opposed to the inner side face;
 - 5 the module body, inserted from the opening to be accommodated in
 - 6 the chamber;
 - 7 a first conductive member, provided on an outer periphery of the
 - 8 module body which is opposed to the inner side face of the connector in a
 - 9 case where the module body is accommodated in the chamber;
 - 10 a second conductive member, comprising a plurality of parallel
 - 11 contact pins each bent into a generally inverted V-shape, fully located
 - 12 within said connector and provided on the inner side face of the connector,
 - 13 such that the first conductive member is brought into contact with the
 - 14 second conductive member in a case where the module body is plenarily
 - 15 accommodated in the chamber, and
 - 16 wherein the second conductive member is extended from the inner
 - 17 side face to the outer side face so as to be connected to an external line at
 - 18 the outer side face.
- 1 Claim 2 (Original). The connection structure as set forth in claim 1,
- 2 wherein the second conductive member is extended in a direction parallel
- 3 to an inserting direction of the module body.

Claim 3 (Canceled).

- 1 Claim 4 (Original). The connection structure as set forth in claim 1,

2 wherein the module body is a camera module.

1 Claim 5 (Original). The connection structure as set forth in claim 1,
2 wherein an end of the chamber opposite to the opening is made open.

1 Claim 6 (Original). The connection structure as set forth in claim 1,
2 wherein at least a pair of the second conductive member is arranged on the
3 inner side face of the connector so as to oppose to each other.

1 Claim 7 (Original). The connection structure as set forth in claim 6, wherein
2 the second conductive member has elasticity.

1 Claim 8 (Previously Presented). The connection structure as set forth in
2 claim 1, wherein a plate is attached to a side of the connector opposite to
3 the opening.

1 Claim 9 (Currently Amended). A connection structure, comprising:
2 a connector, having a top surface and a bottom surface opposed to
3 the top surface , and having an inner side face defining a chamber
4 communicating a first opening formed in the top surface and a second
5 opening formed in the bottom surface ;
6 a module body, having a top surface and a bottom surface opposed
7 to the top surface , adapted to be accommodated in the chamber;
8 a first conductive member, provided on an outer periphery of the
9 module body which is opposed to the inner side face of the connector in a
10 case where the module body is accommodated in the chamber; and
11 a second conductive member, comprising a plurality of parallel
12 contact pins each bent into a generally inverted V-shape, provided on the
13 inner side face of the connector, such that the first conductive member is
14 brought into contact with the second conductive member in a case where

15 the module body is plenarily accommodated in the chamber;
16 wherein the first opening has a same shape and a dimension as the
17 second opening[[:]]
18 ~~the chamber is shaped as a columnar through hole penetrating from~~
19 ~~the first opening to the second opening.~~

1 Claim 10 (Currently Amended). The connection structure as set forth in
2 claim 9, wherein the bottom surface of the connector is coplanar with the
3 bottom surface of the module body in a case ~~where~~ when the module body
4 is plenarily accommodated in the chamber.

1 Claim 11 (Previously Presented). The connection structure as set forth in
2 claim 9, wherein a plate is attached to the bottom surface of the connector.

1 Claim 12 (Currently Amended). The connection structure as set forth in
2 claim 1, wherein each of the ~~second conductive member comprises~~ inverted
3 V-shaped contact pins fixedly secured to the inner side surface of the
4 connector comprises:

5 a first end portion of said contact pin formed into a terminal which
6 is exposed to a lower side of the connector through an associated opening
7 and is bent outwardly horizontally so as to be electrically connected with a
8 circuit formed on a wiring board on which the connector is mounted; and
9 a second end portion of said contact pin bent to project inwardly to
10 form a contact projection for contact with an associated contact pad of the
11 module body.

1 Claim 13 (Previously Presented). The connection structure as set forth in
2 claim 9, wherein the second conductive member is fully located within said
3 connector.

1 Claim 14 (Currently Amended). The connection structure as set forth in
2 claim 9, wherein each of the second conductive member comprises inverted
3 V-shaped contact pins fixedly secured to the inner side surface of the
4 connector comprising:

5 a first end portion of said contact pin formed into a terminal which
6 is exposed to the lower side of the connector through an associated opening
7 and is bent outwardly horizontally so as to be electrically connected with a
8 circuit formed on a wiring board on which the connector is mounted; and
9 a second end portion of said contact pin bent to project inwardly to
10 form a contact projection for contact with an associated contact pad of the
11 module body.
